

## 3.2 MG Tank at Ave M and 62nd Street West

This project involves the construction of a 3.2 million gallon storage tank southeast of the intersection of Avenue M and 62nd Street West in Lancaster. This reservoir will feed the west side of the Lancaster system's 2555 pressure zone by way of a new pipeline. This project is currently in design and is expected to begin construction in summer 2010.
